

## Off-road Rubber Track Carrier

# **BH41**

# **Operator's Manual**

## **AWARNING!**

Read this manual completely before operating or maintaining this machine. Failure to follow safety precautions could result in serious injury or death. Keep this manual for future reference by you and by all those who operate and maintain this machine.

#### **Notice to Users and Maintenance Personnel**

Thank you for purchasing this machine.

This manual provides information needed for safe and effective use of this machine to those who operate or maintain the machine. Make sure to read and understand the manual thoroughly before operating this product. Also make sure to read the separate operator's manual for the engine.

### **AWARNING!**

- This machine can be very dangerous if the safety precautions in this manual and on the labels attached to this machine are not followed. Read and understand this manual and the safety labels on the machine thoroughly before using this machine. Always follow the instructions and safety precautions, or serious injury or death could result.
- This machine should only be used for its intended purpose: hauling and dumping. Any other use could be dangerous.
- This machine may not be operated on public road or what is considered to be public road. It is the sole responsibility of the operator to consult the local regulations.
- Do not modify this machine, or do not operate this machine with the safety covers removed or open. A serious accident could result.

### **ACAUTION!**

• Store this manual in a safe, accessible place for easy reference.

#### **Notice to Owner**

## **▲**CAUTION!

• Be sure that everyone who uses this machine, including those who rent or lease this machine, receives a copy of this Operator's Manual and understands the importance of reading and following the information in this manual.

## **Warning Terms Used in this Manual**

In this manual, the following four warning terms are used to signal the four levels of hazard (or seriousness of possible accidents). Read and understand what they mean and always follow the instructions in this manual.

| Warning Term      | Definition  |  |  |
|-------------------|---|--|--|
| ▲ DANGER!         | Indicates an imminently hazardous situation which will result in death or serious injury if the user does not follow the procedures or the instructions.                            |  |  |
| <b>▲</b> WARNING! | Indicates a potentially hazardous situation which could result in death or serious injury if the user does not follow the procedures or the instructions.                           |  |  |
| <b>▲</b> CAUTION! | Indicates a potentially hazardous situation which could result in minor to moderate injury or damage to the machine if the user does not follow the procedures or the instructions. |  |  |
| NOTE              | Indicates important information which needs particular attention.   |  |  |

### **Warranty and After-Sales Service**

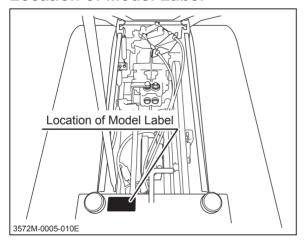

#### **Warranty**

Chikusui Canycom, Inc. provides a warranty through your local Canycom dealer. A copy of this warranty is attached to the back of this manual.

#### **After-Sales Service**

Consult your local Canycom dealer or our company's sales department regarding service orders or any questions or problems that may arise when using this machine. Please make sure to have the product name, serial number, and the make and type of the engine handy at the time of contact. The model and serial number can be found on the model label as shown below, and the make and type of the engine can be found in Chapter 3 "Specifications" of this manual (Page11).

#### **Location of Model Label**

#### **Model Label**

### **Availability of Spare Parts**

The replacement or repair parts for this product shall remain available for seven years after the production of this type of machine is discontinued.

# Warranty

Warranty Certificate is attached at the end of this manual.

\* Have the warranty certificate signed and sealed after you have received and fully understood the instructions for handling this machine and received the receipt.

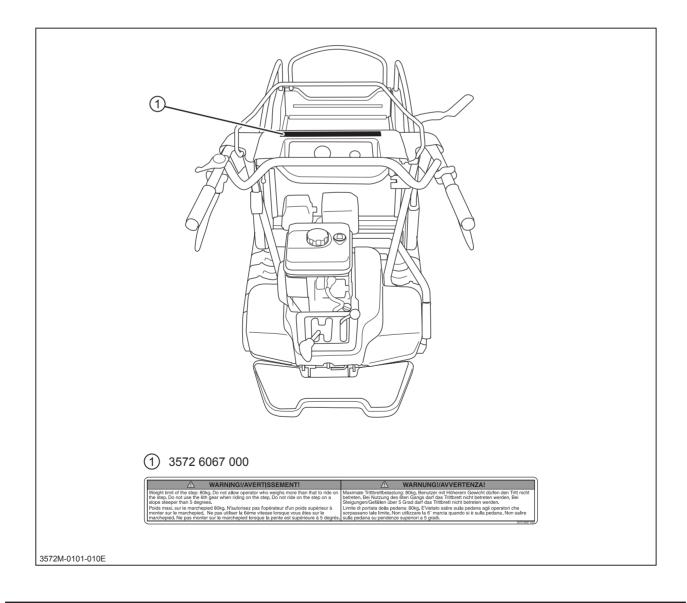

# **Appendix**

- Operator's Manual for the Engine
- \* Be sure to read and understand it together with this manual .

### **Safety Labels**

The safety labels shown below are attached to the machine. See the illustration below for the location and the content of each label on the machine.

- Locate all the warning labels attached to this machine. Read and follow the instructions and precautions in them. Failure to do so could result in serious injury or death to the operator or bystanders.
- Keep the labels clean and legible. Do not use solvents or gasoline to clean the labels.
- Replace these labels immediately if they have been removed, have fallen off or become illegible. Use the part number, on the label or shown in this manual, to order a replacement label from your CANYCOM representative.

# **Safety**

### **Safety Precautions**

This section contains safety precautions to follow when operating and maintaining the machine. Read and understand the precautions in this section as well as throughout this manual and follow them when operating or maintaining the machine. Failure to follow safety precautions could result in property damage, serious injury or death to the operator or bystanders.

### **Training**

All operators should be familiar with the following issues when using this machine. In case the machine is used by a hired worker or is rented, the employer or renter shall give practical instructions covering the following issues to the user.

- It is essential to familiarize yourself with the controls, the safety labels and the proper use of the machine.
- Never allow people unfamiliar with these instructions to operate or service the machine. Do not let anyone under 18 years of age to operate this machine. Local regulations may restrict the minimum age for operating a machine. Consult your local authority.
- This machine is intended to carry only one operator on the step. Do not carry a passenger other than the operator.
- The operator is responsible for the accidents or hazards caused to other people or their property.
- Always keep in mind that care and concentration is required when working with a load-carrying machine.
- Loss of control on a slope cannot be regained by the application of the brake. The main reasons for loss of control are:
- → insufficient grip of tracks.
- $\rightarrow$  excessive speed.
- → misjudging of the ground conditions, especially inclination.
- → excessive load.
- → incorrect distribution of load.

#### **Preparation**

- Fuel is highly flammable. See Checking and Filling Fuel, page 13, for important safety information on handling fuel.
- Always wear protective footwear, long trousers, hardhat, safety glasses and ear
  protection when operating or servicing the machine. Proper clothing will minimize
  the chance of injury. Do not operate the equipment if you have long hair, loose
  clothing, or jewelry; all of which can get tangled in moving parts. Do not operate the
  machine barefoot or with open sandals.
- Prepare beforehand the working rules and procedures such as signaling and trafic control for the work place. Following such rules will reduce the risk of accidents.
- Never handle fuel, oil or grease, service the engine, or recharge the battery in the presence of fire or spark.
- Perform the daily pre-startup inspection (see Preparation, page 13) before starting the machine. Repair or replace damaged parts before starting the machine.

### **Operation**

This machine is intended for carrying grains, produce, dirt and similar materials. Carrying other objects may damage the machine. Avoid carrying liquid concrete. That will damage the machine.

The stability of the machine is affected by speed, rate of steering, terrain and load. Always pay close attention to these factors or loss of control or tip over could occur, resulting in property damage, serious injury or death.

#### **General Driving**

- Do not operate the engine in a confined space where dangerous carbon monoxide fumes can accumulate.
- Do not touch the engine, muffler or exhaust pipe while the engine is running or soon after it has stopped. These areas will be very hot and can cause burns.

- Do not operate the machine under the influence of alcohol or drugs. Do not operate the machine when you are tired, ill, or not feeling well.
- Always check for obstacles before operating on new terrain.
- Before starting the engine and moving the machine, scan around your surroundings and make sure all persons and other vehicles are a safe distance away from the machine.
- On a slippery surface, travel slowly and exercise caution to reduce the chance of skidding or sliding out of control. Never operate on ice.
- Always make certain that there is no obstacle or person behind the machine when backing up. After confirming that it is safe to back up, move slowly and avoid sharp turns.
- To reduce the risk of tip over, pay special attention when encountering an obstacle or a slope, or when braking on a slope or during a turn. See Driving on the Slope on the next page.
- Never attempt to drive over a large obstacle such as rock or fallen tree.
- Always travel slowly and use extra caution when operating on unfamiliar terrain. Be alert when traveling on changing terrain.
- Never operate on terrain that you are not comfortable with. Avoid terrain that is so rough, slippery or loose that you feel like you could tip over.
- Do not operate the machine near the edge of a cliff, an overhang or a landslide area.
- Do not make sudden maneuvers. Sudden start, stop, or turn can make the machine lose control and could cause tip over. Be especially cautious when traveling on soft or wet ground.
- Drive at a safe speed, taking into account the surface gradient, surface conditions and load.

 Use an observer to help direct the machine when the visibility is poor, terrain is rugged or hilly, or maneuvering room is limited. The observer should be able to see the machine and its immediate surroundings, and should give pre-arranged signals to direct the operator.

#### **Riding the Machine**

- This machine is intended to carry only one operator on the step. Do not ride anywhere other than the step. Do not carry a passenger other than the operator.
- Observe weight limit of the step: 80kg. Do not let anyone over the limit to ride on the step.
- Always set the handle lever in the highest position when riding. Riding with the handle lever in other positions may result in loss of balance.
- Always hold the handle grips with both hands to keep a posture when riding the machine. Avoid sudden maneuvers. Operator can be thrown off the machine or the machine can tip over.
- Pay attention to the weight distribution of the machine when riding. Weight shifts to the back of the machine when there is no load. Loss of balance may result.
- Never ride the machine on the slope. The operator can be thrown off or the machine can tip over.
- Never use the 6th gear when riding. The operator can be thrown off or the machine can tip over.

#### **Driving on the Slope**

- Driving on the slope can be dangerous. It can result in tip over and cause serious injury or death. Always follow proper procedures for driving on the slope as described in this manual.
- When carrying no load, never use the machine on the slope steeper than 25 degrees. When carrying a load, never use the machine on the slope steeper than 20 degrees.
- Driving on the slope in a wrong manner can cause a loss of control or a vehicle tip over. Check the terrain carefully before attempting to drive on the slope.

# **Safety**

- Never drive on a slope that you are not comfortable with. Avoid a slope that is so rough, slippery, or loose that you feel like you could tip over.
- When driving up a slope, proceed at a steady rate of speed and throttle position.
- Never move the throttle lever or operate the side clutch suddenly.
- Drive straight up or down the slope. Avoid turning on the slope.
- If the engine stalls or loses traction during a climb and cannot make it to the top of the slope, do not try to turn the machine around. Carefully back down slowly, straight down the slope.
- When going over the top of a slope, go slow; an obstacle, a sharp drop, or another vehicle or person could be on the other side of the crest.
- Avoid driving the machine across the slope.
- Without a load, drive the machine backwards up the slope (operator's step toward the top) when climbing, and drive it forward when going down the slope. Never operate on the slope steeper than 25 degrees.
- With a load, drive the machine forward up the slope (operator's step away from the top) when climbing, and drive it backwards when going down the slope. Be especially cautious when operating on the slope with a load.
- When driving down the slope, stop and shift to one of the first three gears (auxiliary transmission in Low). Go down at a reduced speed. Use the engine speed to help keep the machine speed low.

#### Loading and Driving with the Load

- The maximum payload for this machine is 400kg in the walk-behind mode and 300kg when being ridden. Do not exceed this maximum payload under any circumstance.
- Do not operate on the slope steeper than 20 degrees when carrying a load. Do not carry more than 200kg when operating on the slope between 15 and 20 degrees.

- Place the load in the loading deck so that the weight is evenly distributed. When carrying a load, strap it to the loading deck to prevent it from shifting. Ensure that the load does not obstruct the operator's field of view.
- When carrying a load, drive at a reduced speed. Allow greater distance for braking.
- Before crossing a bridge or an overpass, make certain that the total combined weight of the machine, the load and the operator is within the stated weight limit of the bridge or the overpass. Then, proceed carefully and at a constant speed.

#### **Dumping**

When dumping material from the loading deck, take the following precautions.

- Always follow the proper procedures for dumping as described in this manual.
- Perform the dump operation on a flat, level and stable surface whenever possible.
   Raising or lowering the loading deck on the slope or on the rough terrain could result in tip over.
- Make certain that all persons are at a safe distance away from the machine when raising or lowering the loading deck.
- Do not move the machine or leave it unattended with the loading deck in the raised position.
- Engage the loading deck safety prop if you must place any part of your body under the loading deck in the raised position.

#### **Parking**

- Park the machine on a flat, level and stable surface. Never park the machine on a slope steeper than 15 degrees. Avoid parking on a slope less than 15 degrees.
   If parking on a slope less than 15 degrees is unavoidable, block the tracks at the lower end of the machine.
- → Without a load, park the machine with the operator's step toward the uphill
- → With a load, park the machine with the operator's step toward the downhill
- → Do not park sideways on the slope.

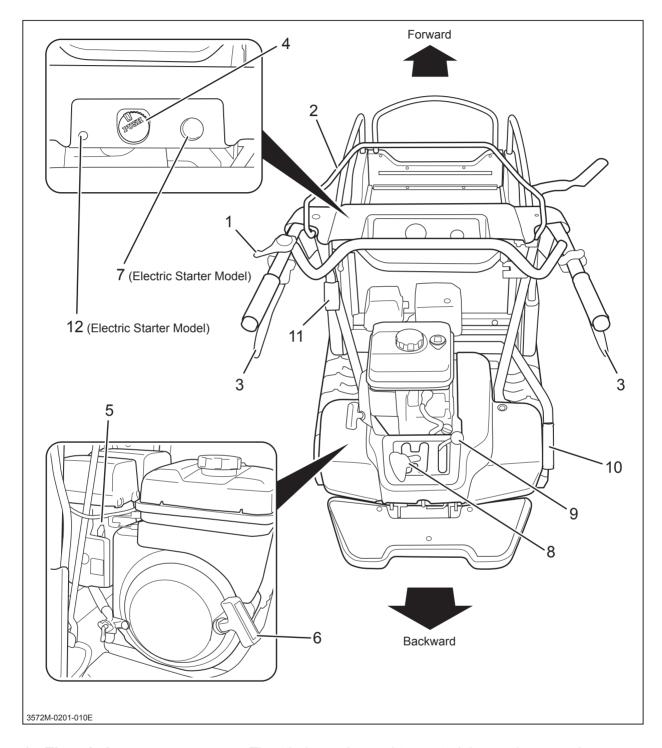

# **Safety**

- Observe all the previous precautions for general driving, riding the machine, driving on the slope, loading and driving with the load, and dumping.
- Whenever you park the machine, disengage the clutch and stop the engine.
- Gasoline is highly flammable and can be explosive. When parking the machine indoors, make certain that the building is well ventilated and that the machine is not close to any source of flame or spark, including appliances with pilot lights.

#### Servicing

- Do not service the machine when the engine is running. If it is absolutely necessary to run the engine while servicing, keep hands, feet, clothing and any part of the body away from any moving part, especially the belts at the side of the engine.
- Do not operate the engine in the confined space where dangerous carbon monoxide fumes can accumulate.
- Check all fuel lines on a regular basis for tightness and wear. Tighten or repair them as needed.
- Do not touch the engine, muffler, or exhaust pipe while the engine is running or soon after it has stopped. These areas will be very hot and can cause burns.
- The engine must be shut off before checking or adding oil.

### Name and Function of Controls

- 1 Throttle Lever . . . . . . . Throttle Lever is used to control the engine speed.
- 2 Clutch Lever . . . . . . . Clutch Lever is used to engage or disengage drive clutch.
- **3 Side Clutch Lever** ...... Side Clutch Lever is used to steer the machine by engaging side clutch.

| 4  | Main Switch Main Switch is used to start or stop the engine. |  |
|----|--|--|
| 5  | Choke Lever  | Choke Lever is used to help start the engine by closing choke valve.   |
| 6  | Starter Handle   | Starter Handle is used to start the engine.  |
| 7  | Starter Button   | Starter Button is used to start the engine (Electric start model only).  |
| 8  | Shift Lever  | Shift Lever is used to shift gears.  |
| 9  | Auxiliary Transmission Shift Lever                           | Auxiliary Transmission Shift Lever is used to select the fast or slow driving mode.  |
| 10 | Dump Lever   | Dump Lever is used to raise or lower loading deck for dumping.   |
| 11 | Handle Lever Adjuster  | Handle Lever Adjuster is used to adjust the angle of<br>Handle Lever. Raising handle lever adjuster unlocks<br>handle lever. |
| 12 | Backing up Warning<br>Lamp                                   | Backing up Warning Lamp lights up when shift lever is in reverse.  |

<sup>[ ]</sup> indicates the recoil start model.

<sup>\*</sup>These specifications are subject to change without notice.

### **Preparation**

#### **Pre-start up Inspection**

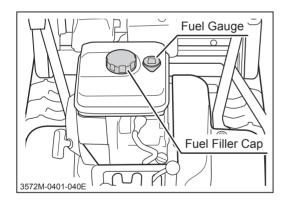

Always perform an inspection before use.

Refer to "Maintenance Schedule" (page 30) for the inspection schedule and procedure.

### **Checking and Filling Fuel**

## **▲WARNING!**

- Keep fire and spark away when handling fuel.
- Always stop the engine before refueling.
- Keep the fuel level below the bottom of the fuel filter inside the fuel filler. Do not overfill fuel so that fuel will not overflow. In case fuel is spilt, wipe out immediately.

- 1. Check fuel gauge. If fuel level is low, fill fuel.
- 2. Open fuel filler cap and fill fuel.
- 3. Close fuel filler cap securely.

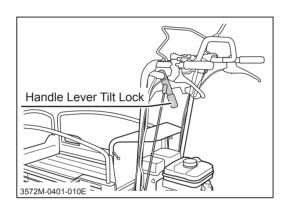

#### NOTE -

- Fuel: Automotive unleaded gasoline
- Fuel Capacity: 2.5L

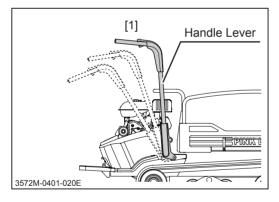

#### **Adjusting Handle Lever Angle**

# **ACAUTION!**

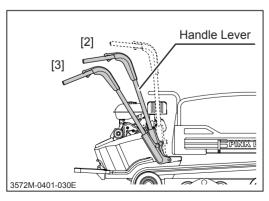

- Pinch hazard. Make certain that hands or fingers are not in the way to be caught when adjusting handle lever.
- Make certain handle lever is securely locked after adjustment. Move handle lever back and forth to see if it is locked.

- 1. Move up handle lever tilt lock to unlock handle lever. Move handle lever to a desired position.
- 2. Once handle lever is in the desired position, release handle lever tilt lock. Make certain handle lever is securely locked in place.

3. Move handle lever to [1] position when riding.

4. When using the machine in the walk-behind mode, move handle lever to [2] or [3] position to suit operator's physique or liking.

### **Driving**

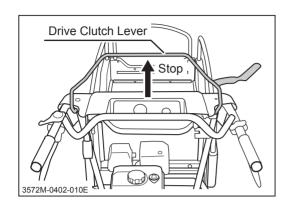

#### **Starting**

### **AWARNING!**

- Always start and run the engine in a well ventilated place.
- Always make certain of the safety of your surroundings when starting the engine.

### **ACAUTION!**

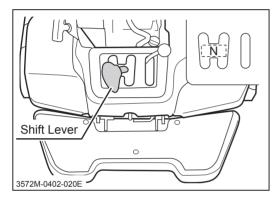

- Do not turn the starter when the engine is running. The starter motor and/or the engine may be damaged.
- Do not turn the starter for more than 5 seconds. If the engine does not start, wait for 5 seconds or more before attempting to start again.
- Do not use this machine in temperatures above 40°C or below -5°C. This machine cannot perform adequately in these temperature ranges. Using this machine under such conditions may result in an accident or cause damage to the machine.
- In the winter or cold climate, warm up the engine thoroughly before driving the machine. A cold engine delivers poor performance, which may result in an accident. It also causes excessive wear.
- Do not use this product in dusty places such as desert. Dust may clog the air cleaner or enter the engine, which may resit in loss of performance and an accident. It also causes excessive wear.
- Do not use this machine in the altitude above 1500m in its original configuration.
   This machine cannot perform adequately above that altitude. Using this machine under such conditions may result in an accident or cause damage to the machine. If you need to use this machine above that altitude, contact your Canycom representative.

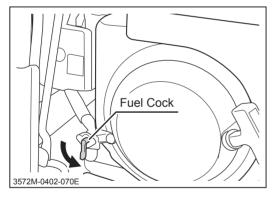

Make sure drive clutch lever is in [Stop] position.

#### NOTE -

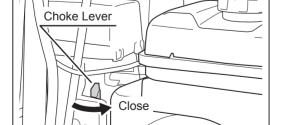

- Electric start model is equiped with safety interlocking switch, and it can only be started when drive clutch lever is in [Stop] position.
- 2. Make sure shift lever is in [N (neutral)] position.

3. Open fuel cock.

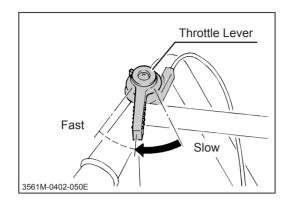

4. Move choke lever to [Close] position.

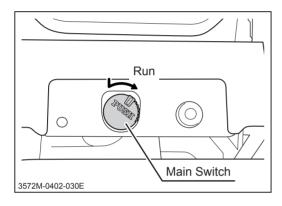

3572M-0402-150E

#### NOTE -

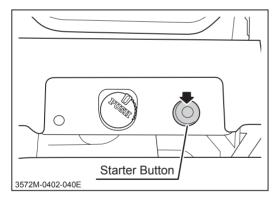

• It is not necessary to close the choke valve when the engine is already warm.

5. Move throttle lever a little toward [Fast] position.

6. Press down main switch and turn it to [⊘(run)] position until it locks in that position.

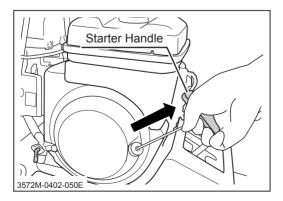

#### **Electric Start Model**

7. Push starter button to start the engine.

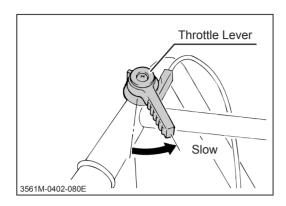

#### NOTE -

- Avoid frequent starting. Once the engine starts, run it for a while to charge battery.
- When the engine cannot be started with electric starter due to flat battery, turn main switch to [⊙(run)] position and start the engine with recoil starter.

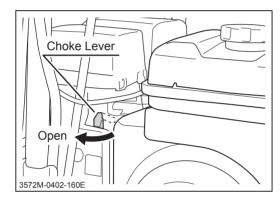

#### **Recoil Start Model**

Pull starter handle rapidly to start the engine.
 When the engine starts, return the handle gently

8. Once the engine starts, return throttle lever to [Slow] position.

- 9. Move choke lever back to the original ([Open]) position.
- 10. Run the engine for about 5 minutes without load to warm up.

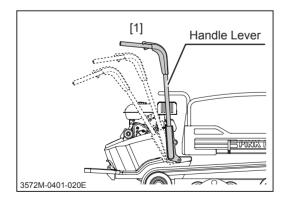

#### NOTE -

• Drive the machine gently in the first 40 to 50 hours of use after purchase for breaking-in.

#### **Driving**

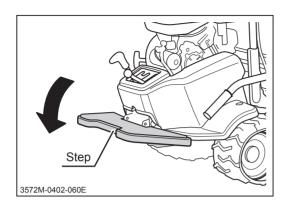

### **AWARNING!**

- Do not allow bystanders to come near the machine when driving.
- Set handle lever and step in appropriate position (for riding or walk-behind) when using. Setting them in an inappropriate position may hinder safe operation.
- Do not use the 6th gear when riding the machine. Operator can be thrown off or the machine can be tipped over.
- Do not ride the machine on the slope. The machine can tip over.
- Always make certain of the safety of your surroundings before driving; start slow.
- · Always make certain of the safety of your surroundings before turning
- Do not make sudden starts, acceralation, change of speed, change of direction, or stop. Do not turn at speed. Avoid sudden maneuvers; this may cause the operator to be dragged or to be thrown, or the machine to tip over.

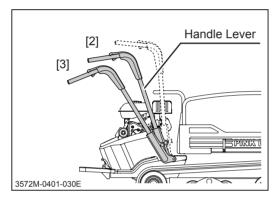

#### Ride-on mode

1. Set handle lever in [1] position.

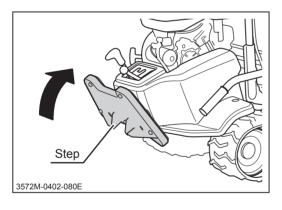

2. Unfold step.

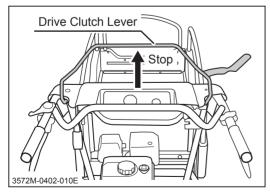

#### Walk-behind mode

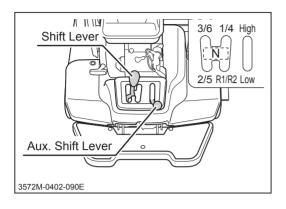

1. Set handle lever to [2] or [3] position.

2. Fold step.

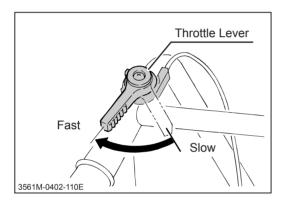

- 3. Make certain of the safety of your surroundings.
- 4. Make certain that drive clutch lever is in [Stop] position.

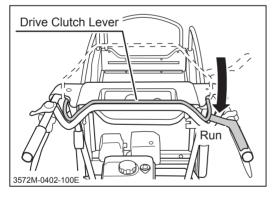

5. Move Shift lever and Auxiliary (aux.) shift lever in a desired position.

#### NOTE -

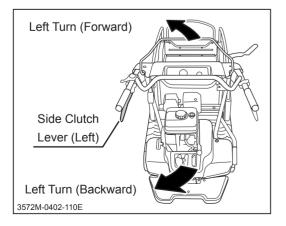

- Refer to "Specifications" (Page 11) for speed in each gear.
- When it is difficult to shift gear, move clutch lever toward the [Run] position slightly and try again. It may help shifting smoothly.
- 6. Move throttle lever to [Fast] position to raise engine speed.

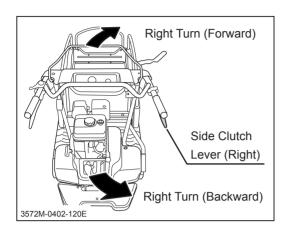

Move drive clutch lever to [Run] position to start.

8. Grasp left side clutch lever to turn left.

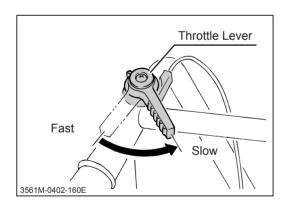

9. Grasp right side clutch lever to turn left.

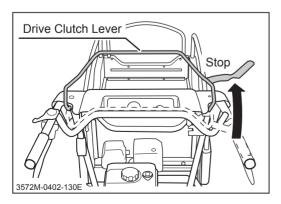

### **Stopping**

# **▲WARNING!**

- Do not make a sudden stop. The machine may skid or tip over.
- Always park on a firm, level ground. Never park on a potentially dangerous place.

1. Move throttle lever toward [Slow] position to decelerate.

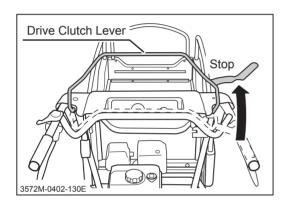

2. Move drive clutch lever to [Stop] position to stop.

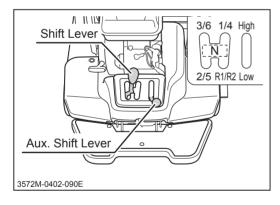

### **Shifting**

# **AWARNING!**

- Always stop the machine to shift gears.
- Always shift gears firmly. When the transmission is not firmly shifted, it may jump out of gear, resulting in loss of control of the machine.

 Move drive clutch lever to [Stop] position to stop the machine.

Move shift lever or auxiliary (aux.) shift lever firmly into a desired position.

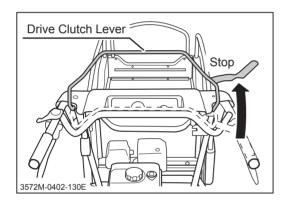

#### NOTE -

- Refer to "Specifications" (Page 11) for speed in each gear.
- When it is difficult to shift gear, move clutch lever toward the [Run] position slightly and try again. It may help shifting smoothly.

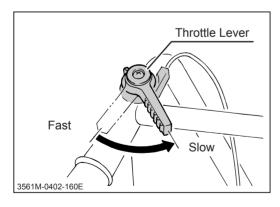

### **Parking**

# **▲**WARNING!

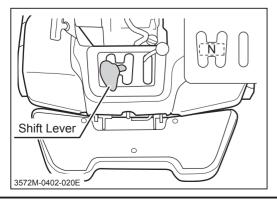

- Always park on a firm, level ground. Never park on a potentially dangerous place.
- Avoid parking on the slope. Never park on the slope with an incline of 15 degrees or steeper. If it is absolutely necessary to park the machine on the slope less than 15 degrees, make certain to apply parking brake firmly and block the tracks with chocks.

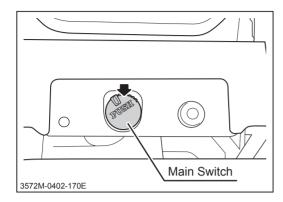

1. Move drive clutch lever to [Stop] position to stop the machine.

2. Move throttle lever toward [ Slow] position to decrease engine speed.

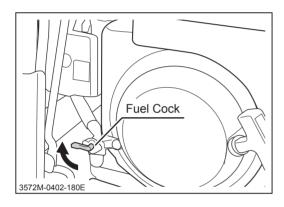

3. Move shift lever to [N (neutral)].

#### NOTE -

- Carbon deposit tends to accumulate on spark plug when running the engine at low engine speed. When the engine has been run at low engine speed for an extended period, run the engine at high engine speed for a while before stopping the engine to burn off carbone deposite.
- 5. Close fuel cock.

### Working

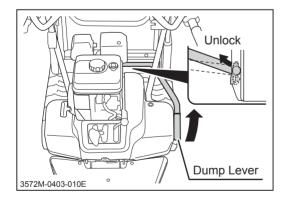

### **Dumping**

### **AWARNING!**

- Always make certain of the safety of your surroundings when dumping.
- Avoid dumping on the slope. The machine may tip over.

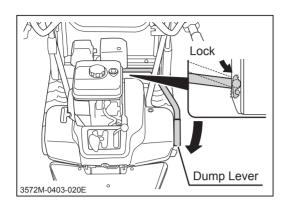

### **ACAUTION!**

- When the load's center of gravity is toward the front of the loading deck, avoid dumping. The loading deck can suddenly fall once the lock is released.
- When lowering the loading deck, use dump lever to lower it.
- When lowering the loading deck with a load on it, lower the loading deck gently.
- On three-way folding gate model, always remove tubular frame on the front door before dumping.

#### **Raising Loading Deck**

- Pull up dump lever to unlock loading deck.
- 2. Keep pulling up dump lever to raise loading deck.

#### **Lowering Loading Deck**

- 3. Hold and lower dump lever.
- Lower dump lever until it locks. Make sure dump lever is securely locked in the lowered position.

#### NOTE -

 Always operate dump lever to raise or lower loading deck. Lock mechanism is linked to dump lever, and it locks or unlocks when dump lever is operated.

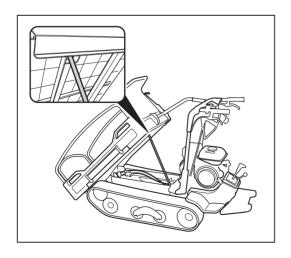

### **Using Safety Prop**

### **AWARNING!**

 Place safety prop under loading deck when inspecting or working under loading deck.

### **ACAUTION!**

• Make certain to undo safety prop before lowering loading deck.

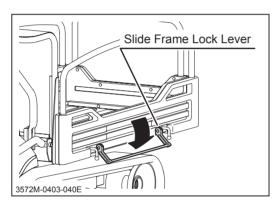

- 1. Raise loading deck.
- 2. Hold loading deck with safety prop.

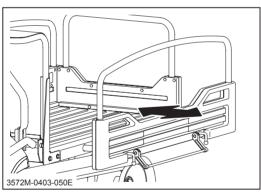

### **Using Slide Frame (Slide Frame Model)**

# **▲**CAUTION!

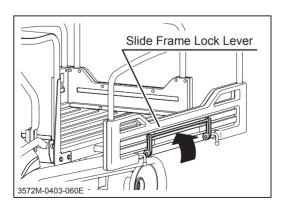

- Always lock slide frame when in use.
- Do not extend slide frame beyond black line on slide frame rod. Slide frame may be damaged.

 Move down slide frame lock lever to unlock slide frame.

2. Move slide frame to a desired position.

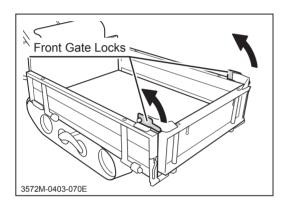

Move up slide frame lock lever to lock slide frame.

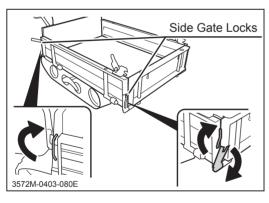

### **Using Side Gate (Three-way Folding Gate Model)**

# **▲**CAUTION!

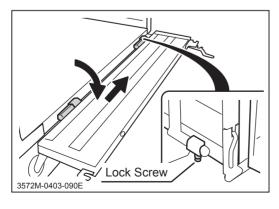

- Lock front gate in vertical position or remove front gate when using the machine with side gate in open position.
- Always remove tubular frame on side gate when using the machine with side gate in open position.

1. Undo front gate locks.

2. Undo side gate locks to open side gate.

- 3. Move down side gate until it is near horizontal. Then, slide it forward to keep it in that position.
- 4. Tighten lock screw to lock it.

### **Maintenance Schedule**

### **AWARNING!**

- Follow the scheduled maintenance as described below. Failure to do so may result in mechanical or property damage, injury or death.
- Perform a pre-startup inspection (PSI) before each use, a monthly inspection once a month, and a yearly inspection once a year.
- Some maintenance procedures described below may require special knowledge or tools and instruments. Contact your Canycom representative to perform such procedures.

|        |             |  | Sc       | Schedule |          |   |

|                  | Initially - After 50 hours of use. | API rating: GL-4 or 5     | 1.5L |
|                  | Every 500 hours afterwards.        | SAE rating: 80            |      |

# **List of Consumables and Spares**

# **▲**CAUTION!

• When replacing a consumable or spare, always usethe CANYCOM genuine part.

| Item                                       | Part No.     | Schedule  | Qty. |
|--|--------------|---|------|
| Engine                                     |              |   |      |
| Air Cleaner Element                        | KA01091AA004 | Replace if defective.                           | 1    |
| Spark Plug (NGK BP6HS)                     | FA21273      | Replace if defective.                           | 1    |
| Fuel Filter                                | KF31035AA003 | Replace if defective.                           | 1    |
| Drive Train                                |              |   | •    |
| V-Belt (Engine-Middle Pulley LA28 [AG6])   | 08521600028  | Replace if defective.                           | 1    |
| V-Belt (Middle Pulley - Transmission LB63) | 08521300063  | Replace if defective.                           | 1    |
| Track                                      | 35722021000  | Replace if defective or reaches the wear limit. | 2    |
| Brake Lining                               | 73184019000  | Replace if defective.                           | 1    |
| Wire (Drive Clutch)                        | 35723112000  | Replace if defective.                           | 1    |
| Wire (Parking Brake)                       | 35723113000  | Replace if defective.                           | 1    |
| Wire (Side Clutch Lever Left/Right)        | 35723023000  | Replace if defective.                           | 2    |
| Electrical System                          |              |   | •    |
| Battery*1                                  | 35710207000  | Replace if defective.                           | 1    |
| Fuse 15A (Blue)*1                          | 09801001504  | Replace if defective.                           | 1    |

<sup>\*1:</sup> Electric start model only.

#### NOTE -

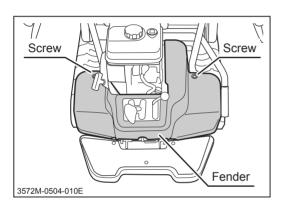

• Track wear limit: 5mm of lug height

## **Removing and Installing Body Panels**

# **▲**CAUTION!

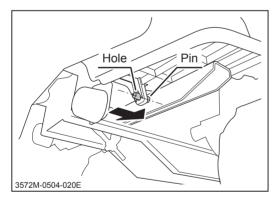

- Cut or pinch hazard exists when removing or installing body panels; beware of sharp edges and pinch points.
- Make certain to reinstall panels after removing for repairs or inspection.

#### **Fender**

#### Removing

Remove two screws that secure fender.
 Remove fender.

#### Installing

- 1. Put fender back in its place. Align hole on fender with pin on chassis and move fender so that pin mates with hole.
- 2. Install two screws.

### **Engine**

### **AWARNING!**

- Always stop the engine before servicing.
- Allow the engine to cool off before servicing. The engine is very hot after operation and may pose a burn hazard.
- Keep fire and spark away when handling fuel.

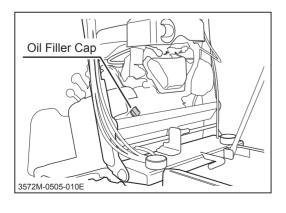

### **Engine Oil**

### **ACAUTION!**

- · Dispose of drained oil properly.
- Make certain to fill the engine with correct grade of oil to the specified level. Insufficient amount or wrong grade of oil reduces performance and may cause permanent damage to the engine.

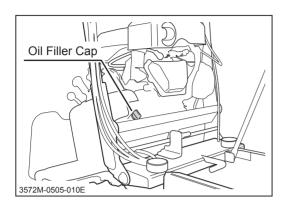

#### NOTE -

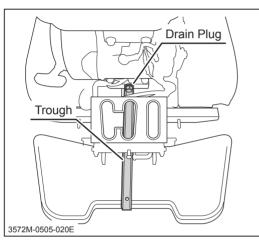

- To obtain correct reading, check oil level before starting, or wait about 10 minutes after stopping the engine to allow oil to drain back to the oil pan. Circulating oil stay in various parts of the engine right after stopping.
- · Always check oil level on a level ground.
- Oil Capacity: 0.5L
- Oil to Use: Automotive gasoline engine oil, API grade SE or better, SAE grade 10W-30 or 10W-40.

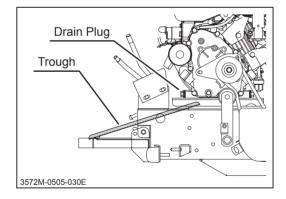

#### Inspecting

- 1. Park the machine on a level ground.
- 2. Lift loading deck and support it with safety prop securely.
- 3. Remove oil filler cap.
- Follow the instructions in "Operator's Manual for the Engine" to check oil.
- Screw oil filler cap firmly back in place.
- 6. Undo safety prop and lower loading deck.

#### **Filling**

- 1. Remove oil filler cap.
- Follow the instructions in "Operator's Manual for the Engine" to fill oil.
- 3. Check oil level.
- 4. Screw oil filler cap firmly back in place.

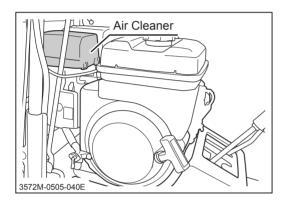

#### Changing

- 1. Have an appropriate oil drain pan.
- 2. Remove fender.
- 3. Remove rubber mat on step.
- 4. Set oil drain trough in place.
- 5. Remove oil drain plug and drain oil.
- 6. Put drain plug back in place.
- 7. Remove trough.
- 8. Fill oil.
- 9. Put rubber mat back in place.
- 10. Install fender.

#### Air Cleaner

### **▲**CAUTION!

- Clean air cleaner element regularly. Dirty air cleaner element reduces engine performance and life.
- Replace air cleaner element if damaged.

 Follow the instructions in "Operator's Manual for the Engine" to clean or replace air cleaner element.

### **Spark Plug**

### **ACAUTION!**

- When removing the spark plug cap, Do not pull the cable; pull the cap. Pulling the cable can damage the conductor or the joint of the cable.
- · Replace spark plug if damaged.

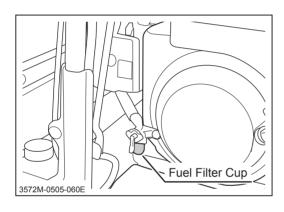

- 1. Lift loading deck and support it with loading deck safety prop.
- 2. Remove spark plug cap and spark plug.
- Follow the instructions in "Operator's Manual for the Engine" to inspect, clean, or replace spark plug.
- 4. Put spark plug and spark plug cap back in place.
- Undo loading deck safety prop and lower loading deck.

### **Fuel Filter**

# **▲**WARNING!

- Fuel is highly flammable. Keep fire and spark away when servicing fuel filter.
- If fuel is spilt, wipe it off immediately.
- Dispose of waste fuel properly.

- Follow the instructions in "Operator's Manual for the Engine" to clean fuel filter.
- 2. Start engine and visually inspect fuel filter cup so that there is no leak.

#### **Drive Train**

### **AWARNING!**

- Stop the engine when servicing the drive train.
- Allow the machine to cool off before servicing. The engine is very hot after operation and may pose a burn hazard.

### **ACAUTION!**

• Dispose of drained oil and fluids properly.

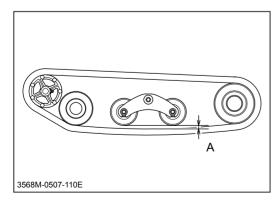

#### **Track**

### **AWARNING!**

- Jack up the machine securely when inspecting and adjusting the track. Jack it up on a level ground.
- · Always unload the machine before jacking up.
- Make certain to adjust track tension properly. Inproperly tensioned tracks may wear or come off, resulting in property damage, serious injury or death.

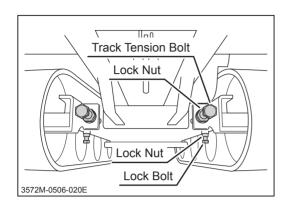

#### NOTE -

• Track stretches during its use-life. Inspect and adjust regularly.

#### Inspecting

- 1. Jack up the machine so that track is parallel to the ground.
- 2. Inspect the clearance between track and center roller (clearance A) to be between 10 and 15mm. Adjust tracks if the clearance is not within this range.
- 3. Lower the machine.

#### **Adjusting**

- 1. Jack up the machine so that it is parallel to the ground.
- 2. Loosen lock nut.
- Adjust track with track tension bolt so that the clearance between track and center roller (clearance A) at the furthest is between 10 and 15mm.
- 4. Tighten lock nut
- Lower the machine.

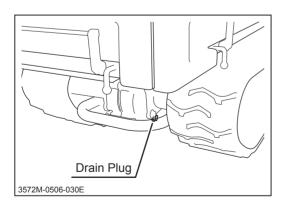

#### **Transmission Oil**

### **▲**CAUTION!

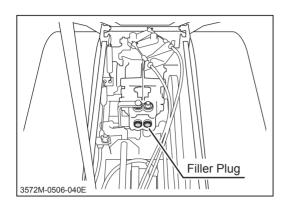

• Make certain to fill the transmission with the correct grade of oil to the specified level. Insufficient amount or wrong grade of oil reduces performance and may cause permanent damage to the transmission.

#### NOTE -

- Oil Capacity: 1.5L
- Oil to Use: API grade GL-4 or 5, SAE grade 80.

- 1. Park the machine on a level ground.
- 2. Have an appropriate drain pan.
- 3. Remove drain plug to drain oil.
- 4. Install drain plug.

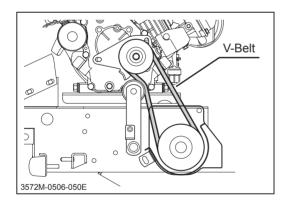

- 5. Lift loading deck and support it with safety prop.
- 6. Remove filler plug.
- 7. Fill oil into the filler.
- 8. Install filler plug.
- 9. Lower loading deck.

#### **Drive Belt**

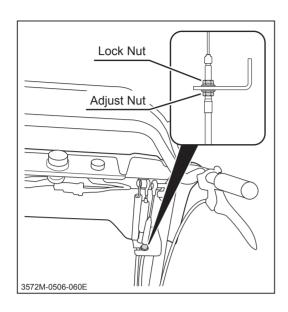

# **▲**CAUTION!

• Adjust belt tension properly. Inproperly tensioned belt may reduce performance and its service life.

#### Inspecting

- 1. Remove fender.
- 2. Visually inspect V-belt for damages. If damaged, contact your dealer to replace it.
- 3. Install fender.

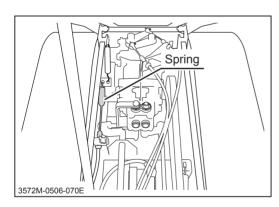

#### **Adjusting**

- 1. Move drive clutch lever to [Stop] position.
- 2. Loosen lock nut.
- 3. If belt slips, tighten adjust nut to tension belt.
- 4. If drive clutch does not disengage positively, loosen adjust nut.
- 5. When adjustment is done, tighten lock nut.

### **Parking Brake**

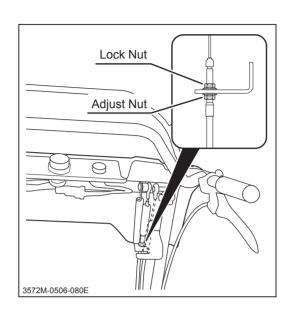

## **▲WARNING!**

• Always keep brake adjusted for maximum performance. Improperly adjusted brakes may result in property damage, serious injury, or death.

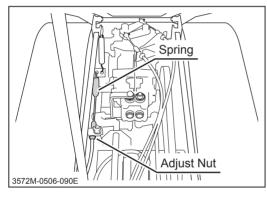

#### Inspecting

- Lift loading deck and support it with safety prop.
- 2. Move drive clutch lever to [Stop] position.
- 3. Inspect the amount of stretch of brake spring is approximately 5 mm. If it is not, adjust.
- 4. Undo safety prop and lower loading deck.

#### Adjusting - on the Lever

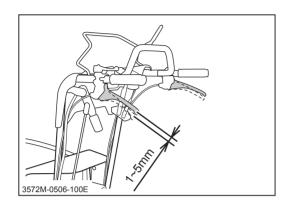

- 1. Lift loading deck and support it with safety prop.
- 2. Move drive clutch lever to [Stop] position.
- 3. Loosen lock nut.
- 4. Adjust the amount of stretch of spring with adjust nut so that the amount of stretch is approximately 5 mm.
- 5. Tighten lock nut.
- 6. Undo safety prop and lower loading deck.

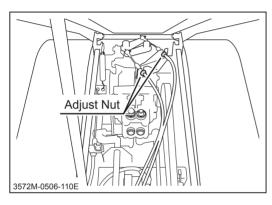

#### Adjusting - on the Brake

- Lift loading deck and support it with safety prop.
- 2. Move drive clutch lever to [Stop] position.
- 3. Adjust the amount of stretch of spring with adjust nut so that the amount of stretch is approximately 5 mm.
- 4. Undo safety prop and lower loading deck.

#### **Side Clutch**

- Lift loading deck and support it with loading deck safety prop.
- Adjust side clutch with adjust nut so that the play on side clutch lever is between 1 and 5 mm.
- 3. Undo safety prop and lower loading deck.

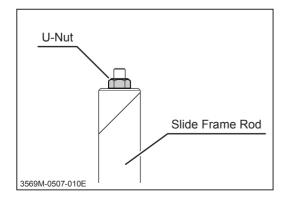

# **Loading Deck**

### **Adjusting Slide Frame (Slide Frame Model)**

## **ACAUTION!**

• Do not apply oil or grease on slide frame rod. Slide frame will not lock.

- Remove slide frame from loading deck.
- 2. Adjust U-nut at the end of slide frame rod. If slide frame is too tight, loosen U-nut. If slide frame is too loose, tighten U-nut.
- 3. Install slide frame back on loading deck.

#### **Electrical**

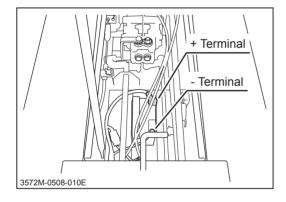

### **AWARNING!**

• Always stop engine and turn main switch to [ (stop)] position when servicing.

### **Battery (Electric Start Model)**

### **ACAUTION!**

- When removing battery, always disconnect the (-) terminal first, and when installing battery, always connect the (+) terminal first. Disconnecting or connecting in the opposite order may cause short circuit.
- When installing the battery, make certain to connect the (+) and (-) terminals to their correct positions. Avoid contact between terminals and other surrounding parts.

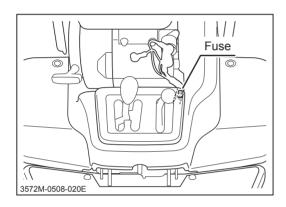

- Lift loading deck and support it with loading deck safety prop.
- 2. Disconnect negative (-) terminal from battery.
- 3. Disconnect positive (+) terminal from battery.
- 4. Remove battery from the machine.
- 5. Install new battery to the machine.
- 6. Connect positive (+) terminal to battery.
- 7. Connect negative (-) terminal to battery.
- 8. Undo safety prop and lower loading deck.

### **Fuse (Electric Start Model)**

# **▲**CAUTION!

- If a fuse blows, investigate the cause and repair it before replacing the fuse.
- Always replace a fuse with the one of the correct capacity. Using a wrong fuse may result in damage to electrical components or cause fire.

#### Inspecting

- Remove fuse and visually inspect if it is blown.
- 2. If it is blown, replace it with a new one of the same capacity.
- 3. Install fuse.

#### Replacing

- 1. Remove blown fuse.
- 2. Install new fuse.

#### NOTE -

• Fuse to Use: Mini Blade Fuse, 15A

#### **After Use Care**

### **ACAUTION!**

- Do not wash the engine, control panel, electrical parts, or tank caps with air breather with running water; water may enter inside and cause rust or damage.
- Clean the machine after use; leaving dirt or foreign objects may cause damage.
- Do not attempt to move the machine when it becomes inoperable due to freezing.

#### **After Normal Use**

- 1. Clean the machine; wash off dirt, mud, and other foreign matter after use.
- 2. If the machine is to be left outside, cover the machine with protective, water-proof covering after the machine is cooled off.

#### **After Cold Weather Use**

- 1. Clean the machine; wash off dirt, mud, and other foreign matter after use.
- 2. Park the machine on a paved or firm, dry surface.
- 3. If the machine is to be left outside, cover the machine with protective, water-proof covering after it is cooled off.

### **Storage**

### **AWARNING!**

• Fire hazard; do not store the machine where there is a possiblity of ignition.

### **ACAUTION!**

- Do not wash the engine or control panel with running water; water may enter inside and cause rust or damage.
- Clean the machine before storage; leaving dirt or foreign objects may cause rust or damage.
- Do not store the machine in a humid, dusty, or hot place.
- 1. Follow the instructions in "Parking" (page 24) to park the machine.
- 2. Clean dirt off of the machine.
- 3. Follow instructions in "Operator's Manual for the Engine" to prepare engine for storage.
- 4. Remove battery from the machine (page 46).
- 5. Cover the machine with protective, water-proof covering after the machine is cooled off.

#### NOTE -

- Battery dischages even when it is not in use. A battery may hold charge for a few months, but it is a good practice to charge the battery before it goes flat; it will extend the battery life.
- Refer to "Operator's Manual for the Engine", for detailed instructions on preparing the engine for storage.

- If any malfunction or abnormal condition is found, immediately stop using the machine and take an appropriate measure according to the Troubleshooting chart below. If the malfunction or abnormal condition is not listed in the chart, or the suggested measure does not solve the problem, consult with your CANYCOM representative.
- Some corrective measures listed below require special knowledge and/or equipment. Please contact your CANYCOM representative in such a case.

| Area   | Malfunction                                      | Possible Cause   | Corrective Measure   | Ref.               |
|--------|--|--|--|--------------------|
|        |  | Safety switch is functioning.  | →Make sure drive clutch is in [Stop] position, and push to turn main switch to [Run] position.                                     | Page 16            |
|        | Engine does not start (starter does not turn -   | Safety switch is malfunctioning or needs adjustment.                 | →Please contact your CANYCOM representative.   |                    |

### Hauling

### **Loading and Unloading**

### **AWARNING!**

- Park the transporter (truck) on a level ground. Always use chocks to secure wheels.
- Do not allow bystandars to come close to the machine or the transporter when loading or unloading the machine.
- Use only the loading ramps with sufficient strength (to withstand the combined weight of the machine and the operator), width (more than 2 times the width of the track), and length (more than 4 times the height of the loading deck of the transporter), and have anti-slip ramp surfaces.
- Secure the hooks of the loading ramps firmly and flush with the loading deck of the transporter.
- Do not ride on the step when loading or unloading the machine on the transporter. Always load or unload in the walk-behind mode.
- Move slowly forward when loading onto, and move slowly backward when unloading off of the transporter. Pay special care when going over the joint between the loading deck and the ramps; the machine may tip.
- Do not turn on the loading ramps. The machine may fall.
- Tie down the machine securely. Make sure the machine does not move around on the loading deck.

# **Transporting**

- 1. Park the transporter on a level ground. Secure the wheels with chocks.
- 2. Place the loading ramps. Secure the hooks of the ramps firmly and flush with the loading deck of the transporter.
- 3. Drive the machine slowly forward onto the loading deck.
- 4. Park the machine according to the instructions in **"Parking"** (page 24). Secure the machine firmly to the loading deck of the transporter with tie-down belts, rope, or wire.

#### **NOISE LEVEL**

| Model | Enç              | LwA       |            |
|-------|------------------|-----------|------------|
| Туре  | Туре             | Speed rpm | LWA        |
| BH41  | Mitsubishi GB130 | 2000 rpm  | 101 dB (A) |

NOISE LEVEL evaluated based on factory standard.

#### **VIBRATION**

| Model | Engine           | Vibration      |
|-------|------------------|----------------|
|       | Rated revolution | Handle lever   |
| BH41  | 2000 rpm         | Below 2.5 m/s² |

VIBRATION evaluated based on factory standard.
